like smooth, curving tapering reaching cover protects
something inside it. "like" a shell over some important
stuff inside. protect from elements but more important
from observation. Impression connected with
metallic shiny, magenta-like network inside thin
over-covering shell. Some of highly sophisticated.
Technology highly involved & ended. working toward
effects.

"like" some connection of electro magnetic, but dealing
with flow-through material setting up interacting
fields. It's like there's these tubes that go
in every which direction - though precisely arranged
according to design, yet a very complex & confusing
design, which ~~uses~~ move a seemingly flowing
but viscous & bio-inimical substance in a
specific proximity pattern where it creates some
sort of ~~non~~ non-contact in, perhaps everywhere
interaction with other portions of the substance
flowing at different angles to itself / "like"
polarized movement. Produces partial field effects.
Substance in tubes is sensibly "like" but thin
clean of what is consistency. Field/energy/cognate
effects thus produced be contained up in shell, but can
be extracted & moved to external location for use or
applied solely within sheltering shell itself.

SUI

7

8/2 (cont). This Field ^(not related in any way to viscous substance) whatever it is has proximity effect on other material. physical effect. Strong searings microwaves on "substance" but very pervasive. Heat involved, but not required to be purposefully generated. Forces itself seem to generate heat to additives & other effects.

8/5 / 86 remains one of description of ^{parts of} base-manor transport process

Substance

8/2 Substance seems to be potentially corrosive - ^{corrosion} has something to do w/ exposure to oxygen & Hydro-carbon-based materials. Keep circulating.

effects(c)

2e12 whole purpose is not intended peacefully - has some sort of conflict - useable result & effect - i.e. - "like" its intended for a military application or something that would aid military objectives.

2e12 things are brought into proximity & brought out again & may be later distributed

Ad4/s "Like" things being in same way irradiated to draw a highlight their own negative characteristics
"like" some sort of toxic agent is subjected to ionizing effects, "mutating" effects so that they are different in subtle ways from former effects, and former defenses become ineffective against them.
